DESCRIBE THE PRESENT AND ORIGINAL (IF KNOWN) PHYSICAL APPEARANCE

The terminal building of Richmond's Union Station is seven bays wide on the entrance facade and three bays wide on the sides. The structure is veneered with an unbonded tile resembling Roman brick with architectural embellishments in stone and terra cotta. A five-bay rough hewn stone loggia with segmented arches frames the entrance and a six-story clock tower forms the southwest corner of the building. The steeply pitched hip roof is covered with red clay tiles and pierced by two rows of dormers. The architectural style of the building is French Renaissance..

Immediately behind the ground floor entrance is a foyer which leads to the main stairway to the first floor waiting room. The rest of the ground floor contains service facilities for baggage, mail, etc. At the top of the stairway is a large colonnaded glass screen which separates it from the main waiting room. The floor of this room is covered with various colored marbles and is appointed with a full range of late-nineteenth century hardware including a very fine wrought iron screen separating it from the trainshed. The upper floors each contain a center corridor running east and west with offices on either side.

The trainshed on the north side of the station measures 123 x 517 feet. Its gable roof is supported by a series of riveted steel trusses on built-up box columns 18 feet on centers. Each truss is a modified Warren type of 123 foot span. It is approximately 24 feet above the level of the platform and has a maximum depth of 14 feet at the peak. A central monitor running the length of the ridge is supported by a similar truss on top of the principal one. A second monitor, much smaller than the first, runs the length of the former. The shed covered six sets of stub end tracks and an overhang of 13 feet 6 inches on either side sheltered a pair of through tracks.*

*Source: With the exception of information on the trainshed, the data is from the Virginia Historic Landmarks Commission photo-data study prepared by Calder Loth, architectural historian, 1969.
