**NATIONAL REGISTER OF HISTORIC PLACES
REGISTRATION FORM**

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

=====

Applicable National Register Criteria (Mark "x" in one or more boxes for the criteria qualifying the property for National Register listing)

- A Property is associated with events that have made a significant contribution to the broad patterns of our history.
- B Property is associated with the lives of persons significant in our past.
- C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.
- D Property has yielded, or is likely to yield information important in prehistory or history.

Criteria Considerations (Mark "X" in all the boxes that apply.)

- A owned by a religious institution or used for religious purposes.
- B removed from its original location.
- C a birthplace or a grave.
- D a cemetery.
- E a reconstructed building, object, or structure.
- F a commemorative property.
- G less than 50 years of age or achieved significance within the past 50 years.

Areas of Significance (Enter categories from instructions)

Section 7 Page 1

SUMMARY DESCRIPTION

A striking row of cedar trees welcomes guests and directs them down the path from Herring Creek Road toward Roseville Plantation. Fields of soy beans and mature grown trees create a lush backdrop and serve as a reminder of the rich agricultural history of King William County. The plantation abuts the Herring Creek to the east, which has proven to be particularly advantageous and critical to its success. Roseville's contributing resources include the two-and-a-half story, four-bay frame dwelling and its surviving outbuildings: a one-story, one-bay detached frame kitchen; a one-story, two-bay frame school; and a large, one-story, single-bay frame granary. Also located on the substantial grounds are the Ryland family cemetery and a slave cemetery, which are contributing sites to the plantation. Finally, there are four non-contributing resources: a 1930s barn, a modern farm storage building, a chicken house and a privy.

DETAILED DESCRIPTION

The house at Roseville stands at the end of a long entrance lane flanked by cedars. The school, privy, and Ryland family cemetery are located to the rear of the house, while the remaining outbuildings are located to the west of the house, with the granary located next to a creek. The main house, oriented to the west, faces Herring Creek Road.

Built in 1807, this two-and-a-half story frame dwelling, clad in beaded weatherboards and painted white, rests on a brick foundation laid in Flemish bond. The asymmetrical façade is four bays across at ground level, while the second story is three bays across. Three gable six-over-six-light dormers pierce the standing-seam metal gable roof. Windows on the ground level are nine-over-nine-light sashes, with six-over-six along the second story. A modern replacement porch, featuring a pedimented gable roof supported by two chamfered posts, embellishes the façade. The rear is configured differently, as both the first and second floors are four bays wide, with only two dormers above. The rear door is also surmounted by a pedimented gable roof supported by brackets. The south end features a remarkable double chimney laid in Flemish bond, with glazed headers and a pent closet the width of the house. The chimney was previously repointed. Prior to 1910, the original free-standing plantation office was moved from behind the house and attached to the south elevation. Through most of the twentieth century it was used as a kitchen and is today an office, once again. The office façade is two bays with four-over-four-light sash windows. The south elevation and the rear are single bay, with six-over-six-light sash windows. A modern garage adjoins the north end of the main house. The one-and-a-half-story two-bay structure complements the main house and matches its massing and design. An additional chimney is featured on this north elevation. This chimney was rebuilt in the late twentieth century, also laid in Flemish bond. A brick date-stamped with "Fox 1807" is found near the base of the chimney.

The interior of the main house features a double pile, central-passage plan with an off-center passage. The stair, typically located in the central passage, is instead located in a rear room and rises along the exterior wall. Wainscoting topped with a chair rail is found in all ground floor rooms. The original wood floor, which is face nailed, is extant throughout the house. A dining room, historically used as a living room, occupies the northwest quad of the ground floor. This room features a Federal-style mantel on the north wall. The mantel has fluted pilasters and reeding on the frieze. To the rear of this room is the stair hall. The open-string stair also rises along the east, rear wall. The railing has simple, squared balusters that support a molded handrail. The square newel post is simple and without decoration.

National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Roseville
King William County, VA**

Section 7 Page 2

The south front room has a plainer mantel than the north room, featuring a simple cornice with ogee moldings. To the rear is a modern kitchen that also provides access to the office. An enclosed service stair in the northeast corner of the kitchen leads to a second floor bedroom.

The second floor originally had a double-pile, central-passage plan with an enclosed stair to the third floor located at the front of the passage. The two smaller rooms have been converted into bathrooms. The mantels on this floor are identical to the mantel in the south first floor room. Two additional rooms and an adjoining bathroom are located on the third floor.

Although Roseville may be viewed as a traditionally designed dwelling, certain features suggest the builders were experimenting with the design to address current housing issues. The non-traditional placement of a second passage and the stair in the rear, along with the asymmetrical fenestration of the facade supports this theory. Some studies suggest that the vernacular builder broke down accepted forms into individual components, and then applied his building knowledge and technology to develop solutions to new problems. Exerting a certain amount of individuality, builders were able to create new forms with this formula.¹ One of the new dilemmas confronting families like the Foxes was a need for greater privacy. The traditional placement of the stairs in central passage did not allow for enough separation between the public rooms on the ground floor and the private rooms above. It was feared a guest would venture to the second floor if the stairs were easily accessible. Builders at this time began to experiment with slightly more flexible plans to achieve this greater privacy. If the stair was still connected with the passage, it was minimally repositioned to a side compartment.² Following this premise, it is feasible to conclude that Roseville's builder manipulated the traditional passage plan to meet the needs of his employer.

The asymmetrical façade further supports this experimentation hypothesis. A typical feature of the central passage dwelling is a symmetrical façade, which alludes to the interior floor plan.³ Due to a lack of structural evidence to suggest that the window was inserted at a later date, it may be presumed the builder once again experimented with the traditional building vocabulary to address a spatial issue. Roseville's west front room is larger than the front room on the opposite side of the passage. It is possible the builders created the asymmetrical façade to accommodate a larger room. To be sure, the building form evolved to meet the changing needs of its inhabitants.

As Roseville evolved, several changes were made to the plantation. Over the past 200 years, the north chimney deteriorated significantly. Unfortunately, it could not be salvaged and was rebuilt. The date brick was rescued and can be found on the rebuilt chimney today. The south chimney fared better and only needed repointing. Two photographs document major alterations most likely made during the Ryland sisters' management of Roseville. An early photograph shows a square porch with four round brick columns supporting a flat roof with solid paneled balustrade. A second photograph dated 1910 depicts the porch with the same brick columns but with shed roof. The last major change to the house was the addition of a garage and laundry room on the north end.

ARCHITECTURAL CONTEXT

Numerous surveys conducted in King William County provide some insight into the early nineteenth-century building practices of the area. Perhaps most significantly, these surveys indicate that the complex of numerous and diverse outbuildings extant at Roseville rarely survive in the county. These surveys also suggest that it was still common for

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Roseville
King William County, VA**

Section 7 Page 3

builders to erect one-and-one-half-story, two-room dwellings in the early nineteenth-century, such as the Seaton House (0050-0063). While two-story and two-and-one-half-stories are also found, Roseville's size certainly denotes the prominence and wealth of its residents, and Fox's position within the county social hierarchy. Roseville is also remarkable for its atypical fenestration and interior plan. The plantation employs an asymmetrical façade, which surveys show is rarely found during this time period. The dwelling utilizes a common central passage plan, although side passages are not unusual in this area. However, of the resources surveyed, the stairs were located within the passage, while Roseville's stairs are located in the rear southwest quadrant of the first floor. This deviation from traditional interior plans is significant and suggests that builders were experimenting with lateral circulation patterns while still retaining the traditional center passage.

A second Fox family house, Retreat (050-0058), was built by John Fox's nephew James, and is located approximately one half mile south of Roseville. This dwelling was completed the year after Roseville, in 1808.⁴ While they were built contemporaneously, Retreat and Roseville are architecturally dissimilar. Retreat is a two-story brick structure built in two separate sections. The original section was designed as a side passage plan; however, the later addition converted this building into the more typical central passage plan that survives today. Retreat did not experiment with an atypical façade fenestration or interior stair placement, further demonstrating the rarity of Roseville and its significance to the architecture of King William County.

Roseville also contains an interesting collection of surviving outbuildings. These buildings include a kitchen, plantation school, early granary and two historic cemeteries along with twentieth century farm buildings that include a barn, chicken house, privy and modern storage shed. Kitchens, smokehouses, and barns are probably the most common outbuilding types that survive on former plantations and farms. Plantation schools and granaries survive less frequently and a review of surveyed properties reveals only one other former plantation with school and only a handful of granaries. The other school was located on Burlington, but no information was available on it. Most of the other granaries surveyed in King William County are combination granary/corncrib and were built in the twentieth century. The one other granary for which information was available was also classified as a granary/corncrib and is a much smaller building than the granary located on Roseville. Not only is the Roseville granary a fairly spacious and substantial building, its banked siting allowed carts to be pulled beneath the building for loading through an elongated slit in the floor.

SECONDARY RESOURCES

Kitchen

South of the house stands a one-story, one-bay, frame kitchen sheathed in beaded weatherboards with a side-gable, standing-seam metal roof. The inset two-bay porch has chamfered posts. A rebuilt chimney and a four-light attic window occupy the east wall. On the south and west elevations, six-over-six-light sash windows are used with an additional four-light attic window on the west elevation. A batten door leads to the interior. The framing is exposed on the interior and a lack of nail holes or plaster indicates that this space has never been finished on the ground floor. The four imposing corner posts are hewn, but not fashioned into an L-shape, and are secured with large wood pegs. Ladder-like stairs with worn treads to the loft are located in the southwest corner of the kitchen. Pieces of beaded weatherboards cover the back of the

**United States Department of the Interior
National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

**Roseville
King William County, VA**

Section 7 Page 4

stair. Nail holes for lath and traces of white wash all indicate that the loft was finished at one time. The presence of a fireplace and double-hung sash windows in the attic further indicate that this space was most likely used as living quarters. The sash-sawn roof framing with lapped and pegged common rafters is exposed in the loft. The type of construction and the cut nails found in the kitchen framing suggests a construction date of 1820-1830. The kitchen is a contributing resource at Roseville.

School

A plantation school is located behind the main house. Similar to the kitchen but smaller, it is a one-story building on brick piers, sheathed with weatherboard siding, and covered with a standing-seam metal gable roof. The façade of the school, however, is two bays with a four-over-four-light sash window. The north and west elevations feature six-over-six-light sash windows with an additional four-light attic window on the west. A brick chimney, laid in six-course bond, is located on the east end. On the interior, the windows and doors have plain architrave trim and there is a plain chair board. There is an enclosed stair in one corner. The school also has brick nogging in the lower half of the wall. The principle beams are hewn and sash sawn and the building is more lightly framed than the house and kitchen, suggesting a time period of 1830-1840 for construction. The floorboards are face nailed and appear to be original. Few plantation schools survive in King Williams County. Only one other such school was identified on properties surveyed in King William. That school was located at Burlington (050-0010), but no additional information was available on what type of building it is. The school is a contributing resource.

Granary

The third extant outbuilding is a granary located behind the kitchen on the southwestern edge of the property, near Herring Creek. It was probably built early in the tenure of the Ryland family, who also had two grist mills in the county. The building is tightly clad with shiplap siding and raised on a brick foundation and piers laid in three-course and five-course American bond. The granary is built on an embankment, enabling a cart to enter under the building from the south end. There is an elongated opening in the granary floor to allow grain inside the granary to be placed in the cart below. The interior framing features large double corner posts with down braces and wide floorboards. Throughout the granary there is evidence of reciprocal sawing and cut nails. Granaries of this size and apparent age are not common. The brick pier laid in three-course American bond suggests a date of around 1820. Only four other granaries have been documented in the King Williams County survey files. Three are combination granaries/corn cribs and are smaller buildings. Two of these were constructed in the twentieth century. The fourth granary may be an early granary, but the only documentation is a photograph from a distance and it is not known if it is still extant. The granary is a contributing resource.

Office

In the nineteenth century, Roseville also included a detached plantation office. Today, it is attached to the main dwelling. The design and layout of the plantation office is identical to that of the schoolhouse. The similarities found in the two buildings suggest that they were constructed during the same time period. It is thought that the office was moved and attached to the house after the death of Susan Ryland in 1888. A 1910 photograph depicts the plantation office attached to the main dwelling, confirming it was moved prior to this date.

CONTINUATION SHEET**

**Roseville
King William County, VA**

Section 7 Page 5

Cemeteries

Two cemeteries are located to the rear of the house and school. The Ryland family cemetery is nearest to the house. Two gravestones are extant, although additional members of the Ryland family are believed to be buried here. The earliest gravestone is that of Nannie Semple Burruss, who died in 1873 as a young adult, the granddaughter of William Semple Ryland, the first Ryland family owner of Roseville. The other stone is for Ann Semple Ryland, a daughter of Ryland, who died in 1913. Ann, one of the three sisters who ran the farm at the turn of the twentieth century, apparently was the last of the Ryland family to be buried in the family cemetery at Roseville. Also buried in the family cemetery is Sallie Brown Ryland, who was buried here in 1907, although no stone survives for her. As many as ten additional graves may be located in the cemetery but this cannot be confirmed without archaeological investigation.⁵ Approximately one hundred yards southwest of the Ryland family cemetery, in the center of the farm, is a copse of trees that tradition holds is a slave cemetery. No grave markers survive, although sunken areas are extant. Both cemeteries are contributing resources.

Other Outbuildings

A 1930s barn stands west of the house, between it and the granary, and north of the kitchen. It is a two-story, three-bay building sheathed in weatherboards and topped with a gable roof. It has a central pedestrian door flanked by two vehicular-sized openings. There is a small one-story, shed-roof wing on the south side of the building.

A small frame privy stands to the rear of the house. It is one story and sheathed with vertical boards, and has a shed roof of standing-seam metal. Its date of construction is unclear. Most privies were generally not long lived and could be moved from place to place, further contributing to their more frequent reconstruction than most outbuildings.

The chicken house and the modern storage building are of similar form although the chicken house probably dates to the second quarter of the twentieth century. Both are one-story, frame buildings covered with weatherboards and with shed roofs of standing-seam metal. Both are located west of the house and south of the kitchen.

These four outbuildings are considered non-contributing resources, due to the period of significance ending in 1913. It is likely that the privy maybe of more recent vintage, such as the 1920s-1930s. With the exception of the modern storage building, the barn, chicken house, and privy are probably contemporary to each other.

King William County, VA**

Section 8 Page 6

STATEMENT OF SIGNIFICANCE

Roseville, a plantation located in King William County, is significant for its ensemble of buildings that includes the house, outbuildings, and cemeteries. Few other properties in the county contain the number and type of buildings and sites found at Roseville. The buildings were constructed beginning about 1807 by John Fox, and later continued by William Ryland. The complex includes the main house, detached kitchen, school, and granary. The former plantation office was moved and attached to the main house as a wing after the Civil War but before 1910. In addition, there are several outbuildings built in the first half of the twentieth century. Also on the property are two cemeteries, a family cemetery and a purported slave cemetery. Architecturally, these buildings are a cohesive complex that illustrates both the success of the successive owners of Roseville and the building practices of this period in King William County. Additionally, Roseville has the potential for archaeological investigations to document other buildings that may have stood on the property including housing for the substantial number of slaves owned by the Fox and Ryland families.

JUSTIFICATION OF CRITERIA AND PERIOD OF SIGNIFICANCE

Roseville is eligible for the National Register of Historic Places at the local level of significance under Criterion C in the area of architecture because of its surviving collection of buildings and their solid integrity. Its period of significance is from 1807, the date of construction of the house, to 1913 when the last of the Ryland family members was buried in the family cemetery on the grounds. Only two years later, the farm was sold out of the Ryland family that had owned it for ninety-five years. During these years the plantation witnessed and benefited from the economic boom of the antebellum South, its subsequent decline, and the changing landscape of the twentieth century.

HISTORICAL BACKGROUND

As populations grew in the seventeenth and eighteenth centuries, counties were frequently dividing and reorganizing. In 1691, King and Queen County was formed out of Kent County. This county then split in 1701 when King William County was organized. The success of King William is deeply rooted in its topography. It has a long tradition of tobacco and cereal crop agriculture, as well as a long history of Native American occupation prior to English settlement. Alluvial floodplains create rich soil and equally important transportation routes. A primary harbor was created at West Point (in King William County) in the eighteenth century. This deep water port connected with the Pamunkey and Mattaponi Rivers, and in turn, facilitated water transportation throughout King William County.⁶ By 1859, the Richmond and York River Railroad linked Richmond to West Point, enabling farmers to transport goods along the rivers and then directly to Richmond. The importance of this traffic cannot be underestimated. As Herring Creek flows into the Mattaponi, Roseville was ideally situated.

The Fox family came to Virginia in the mid-seventeenth century and settled in King William County by 1700, having acquired much of this land through royal grants. The family was important to local history, and produced several public servants, including Henry Fox, a county justice, magistrate, and representative in the Virginia House of Burgesses; the Reverend John Fox; and Joseph Fox, who was appointed a Tobacco Inspector by the Governor of the Virginia Colonies.⁷ John Fox, builder of Roseville, was born in 1760 and held several significant local government positions. He served as Lieutenant and Captain in the Continental Army, Justice of the King William County Court, surveyor, Sheriff, and Master Commissioner.⁸ John Fox was obviously well established in the county when he purchased 300 acres of land in the

**United States Department of the Interior
National Park Service****NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET****Roseville
King William County, VA**Section 8 Page 7

northwestern corner of King William County. He lived nearby at Retreat, steadily increasing his land holdings to 1,220 acres until 1807 when he built Roseville, which he called Floyd's.⁹ At this time Fox owned eighteen slaves, nine horse/mules and two chairs.¹⁰

At Fox's death in 1814,¹¹ Roseville plantation included twenty-one slaves, nine horses/mules, five cows, two "gigs" and 1,457 acres of land.¹² Two years later, in 1816, an advertisement in the *Richmond Enquirer* announced the "Cash Sale of Negroes...ten to twelve likely young Negroes, consisting chiefly of men and boys, belonging to the estate of Capt. John Fox, dec."¹³ Fox's wife, Frances, was also sold several hundred acres of land. Frances Fox moved to Richmond in 1821, two years before her death, and announced the pending public auction of Roseville in the *Richmond Enquirer*. The advertisement stated "...the high land is in good farming order and in a state of rapid improvement. The improvements are extensive and convenient."¹⁴

In 1822, Roseville and its 337-1/2 acres were sold at public auction to William Semple Ryland for \$3,375.¹⁵ Under Ryland's management, the plantation continued to grow and prosper. The Ryland family owned Roseville for ninety-five years. William Ryland, together with Major Dabney, another prominent King William County resident, purchased Upper Mill, commonly known as Dublin Mill, in 1833. Not long after Dabney died, Ryland bought his share and became the sole owner.¹⁶ In 1841, Ryland acquired and operated a second mill, known then as Lower Mill, which was originally built by the Burwells family in the eighteenth century.¹⁷ The 1850 agriculture schedule reports that the Dublin Mill produced 17,500 bushels of corn annually, for a total value of \$12,250.¹⁸ Although the mills were located on a separate parcel from Roseville, they indicate the industry of Ryland at this time. The mills augmented Ryland's income, allowing him to grow his plantation steadily. In 1850, Ryland owned eleven horses, eleven mules, nine milk cows, twenty cattle, thirty sheep and seventy-five swine.¹⁹ The cash value of the farm (apart from the mill) increased from \$7,000 in 1850, to \$15,000 in 1860.²⁰ Accordingly, the number of slaves owned by Ryland also increased from twenty-six slaves in 1830, to forty in 1860.²¹ Ryland steadily increased his land holdings until his death in 1861, at which time the plantation was 798 acres.²²

William and Susan Ryland had a large family that included one son and six daughters. Ryland was a supporter of education, as evidenced by the school that stands behind the house and was probably built during his tenure at Roseville. He also actively supported higher education. Ryland family members were founders of what is now known as the University of Richmond. Originally, it was known as the Virginia Baptist Seminary (1830-1840), then Richmond College (1840-1920), and the University of Richmond after 1820. William Semple Ryland was a trustee and on the Board of Managers from 1835 to 1842, his father had been a trustee before him, and his brother was president of the college from 1841 to 1868. William's son Robert graduated from Richmond College. At least three of the Ryland girls received additional education at Hollins Institute, which became Hollins College and is now Hollins University.²³

By all accounts, the Ryland family inherited a healthy, prosperous plantation upon William's death. Susan Ryland, William's wife, continued to manage Roseville during the thriving antebellum years. The Lower Mill was conveyed to Ryland's daughter, Ann Ryland, who operated it until 1893, at which time she sold the mill and eight acres to the Fox and Moran family for \$ 655. Today the Lower Mill is commonly known by King William County residents as Mitchell's Mill.

Although King William County was not a battleground during the Civil War, it witnessed the passage of 125,000 Confederate and Union soldiers, their equipment, and approximately 56,000 animals through the county.²⁴ Today, a

NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET

Roseville
King William County, VA

Section 8 Page 8

monument at the King William Courthouse notes that 450 men from the county served in the Confederate army. On June 1, 1861, Susan's son Robert, and approximately eighty-four men, marched to Bend's Store and enlisted in the King William Artillery under Dr. Thomas H. Carter.²⁵ Robert Ryland was transferred to the 9th Virginia Calvary in 1862.²⁶ During the war, Robert was wounded three times, and in March 1865, he was captured and became a prisoner of war. The war affected Roseville and this rural farming area. The cash value of the farm plummeted from 15,000 in 1860 to \$8,000 in 1870.²⁷ The significant decrease in the value of the farm equipment (\$1,000 in 1860 to \$30 in 1870) and the value of the livestock (\$2,000 in 1860 to \$700 in 1870) may represent the depressed economy in King William County after the war or suggest that the Rylands perhaps sold some of their assets to continue to run the plantation.²⁸ According to the data reported on the agriculture schedules, Roseville's plantation landscape was dramatically transformed after the war.

Upon Susan Ryland's death in 1888, Roseville again experienced great change when its 798 acres were divided into ten lots among the Ryland children. Three Ryland sisters, Dora, Peachy, and Ann inherited 187 ½ acres and all the plantation buildings.²⁹ The women continued to manage the house and farm, and a fourth sister taught at the school on Roseville, probably in the schoolhouse built by her father. Ann inherited the mill and oversaw its operation while keeping Roseville in operation. The entire family was active in Beulah Baptist Church. Robert was Sunday School Superintendent and Ann taught the young men's Sunday School class for years. She was known for rounding up the youth who were standing around and talking outside instead of attending class. By all accountants, she was a very tough lady.³⁰

It is believed that the plantation office was moved under the sisters' tenure after Susan Ryland's death in 1888. According to a Fox descendant, Elizabeth Parr Trice Adams, "[i]n later years after the slaves were freed, this building was moved to the southern end of the house and has been used as a kitchen..."³¹ It is unclear when precisely the office was moved. The only available documentary evidence is a photograph dated 1910 that shows the office attached to the house. Moving the office to the main dwelling signifies a critical change in the way the plantation is managed and also indicates the deteriorated social hierarchies of the plantation landscape.

The property was owned by Ann Ryland until her death in 1913. Lemuel and Sallie Ann Adams then bought the property in 1917 and were only the third owners of Roseville. The Adams continued to farm the land and built the existing barn during the 1930s.³² The HABS surveys of Roseville in 1936 and 1958, as well as early photographs, depict Roseville in a deteriorated state with broken windows and in need of paint. The detached kitchen is dilapidated – the chimney had collapsed, leaving the west end exposed. While the changes noted are important, the basic architectural integrity of Roseville remained at the time of the reports. The HABS photographs are useful in underscoring how relatively little Roseville was altered since the Fox and Ryland period. The current owners, the Hubbards, purchased the plantation in 1999 and are only the fourth family to live at Roseville.

The house and the variety of the surviving antebellum outbuildings of Roseville plantation are a rare and important piece of King William County history. Only a few complexes of this breadth survive in the county today. Only one other plantation school was identified in the county and little is known about it. The granary at Roseville is also a rare survivor. Through them, one can gain a better understanding of nineteenth century rural Virginia life.
