DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE

The Weblin House is at the end of a long farm lane and is surrounded by flat cultivated fields that form part of a working farm. The three-bay, story-and-a-half building is covered by a gambrel roof which replaces the original gable roof, an alteration probably dating from the early nineteenth century. The house's ground dimension are 35'3" (west facade), 36'10" (east facade), and 21'3" (south gable). At the south end is a massive exterior-end chimney with a T-shaped stack and cap. The chimney features two sets of tiled weatherings with string courses at the top and bottom of each set. A wide plaster band ornaments the base of the corbeled cap. According to the present owner, the chimney stood in poor structural condition in the 1930's, but through the assistance of "Williamsburg architects" it was dismantled and rebuilt using the original material. A comparison of the original chimney as shown in old photographs in the possession of the present owner with the existing one illustrates that the rebuilding was faithful to the original design. The quality of the workmanship is excellent.

The north gable with its interior-end chimney is also a rebuilding most likely dating from the roof alteration. The remaining brickwork is original and generally is in a good state of preservation in spite of its having been whitewashed. The house's west facade and left half of the south gable below the string course is laid in Flemish bond with glazed headers. The east facade and the right half of the south gable is in English bond. English bond also is employed below the water table and in the south chimney. Chamfered brick forms the top course of the water table. A line of glazed headers follows the edge of the original gable. The north gable is now in common bond but it probably was ornamented with a line of glazed headers as well.

The window openings are topped by simple gauged brick flat arches and do not appear to have been altered in size. While the present double-hung windows are modern, the proportion of the openings indicates that they originally contained double-hung sash. The doorway on the east wall has been shifted to the south but the segmental arch marking the top of the original opening is intact. Other alterations include a modern one-story brick wing attached to the south end.

The ground floor is divided into two unequal sized rooms separated by a single frame partition. The larger south room contains a wide fireplace opening framed by a Federal-style mantel. A staircase (sheathed in modern paneling) ascends against the east wall to an intermediate landing, turns at right angles, and continues against the partition to the upper level in a manner very similar to the Wishart House nearby. A late-eighteenth-century mantel surrounds the fireplace opening in the north room. The north room on the upper level contains what appears to be an original bolection molding mantel, a rare survival. The upper level south room has an early but not original mantel of plain design.

STATEMENT OF SIGNIFICANCE

The Weblin House belongs to the small but architecturally important collection of pre-Georgian era vernacular farmhouses of old Princess Anne County, now the city of Virginia Beach. This group includes the Thoroughgood House, the Wishart House, the Keeling House, and several that have been destroyed but are known through photographs and other documentation. The earliest of these houses are characterized by their hall-and-parlor plans and end chimneys, both interior and exterior. This distinctive plan evolved from the late-medieval farmhouses of the western and upland regions of England, and was employed by the many Virginia settlers who came from those areas. In its usual one-story form the plan proved itself suitable to the Virginia climate and life style. As a result it became so prevalent in the first century of settlement that contemporaries termed it the "Virginia style." This plan contrasted with the plan of lowland England farmhouses which featured a center chimney and small central entryway between two chambers -- a plan that was widely used by the New England settlers.

In addition to its being an important example of the "Virginia style," the Weblin House is the only one of its type in the vicinity to preserve its rural setting. The scene formed by the diminutive dwelling set among its broad flat fields with their wooded edges has changed little in the past two hundred and fifty years. The contrast between this scene and the heavy urbanization that has taken place in most of the modern city of Virginia Beach increases the value of the Weblin farm as an historic landscape.

The exact construction date of the Weblin House is uncertain, however several stylistic features such as the gauged brick flat arches, the probability of original double-hung sash, and the formal arrangement of the facade openings indicate a date of around 1700. At that time the land was owned by John Weblin, Jr., who inherited the land from his father in 1686. The then 175 acre farm was originally included in a 750 acre tract granted in 1648 to Thomas Lambert, John Weblin, Jr.'s maternal grandfather. This tract in turn was part of the 1643 patent to Cesar Puggett, from whom Puggett's Neck takes its name.

The farm was sold by the Weblin family to John and Nathaniel Hutchings in 1719. It remained in the Hutchings family until 1751 when it was acquired by Robert Moseley. The Moseley ownership (1751-1774) was the period during which the present gambrel roof most likely replaced the original gable roof. Between 1774 and 1924 the farm passed through over a dozen owners. The present owner acquired it in the latter year from James W. Overstreet.
